

DBT-NIPGR scientists engage in outreach activities

New Delhi, July 09: As a follow up to the inter- ministerial effort of Govt of India - SAMOOHAN (Bringing Together), and recognizing the social responsibility of Indian Scientific community as a game changer for developing career paths, the Department of Biotechnology's National Institute of Plant Genome Research is contributing to the build-up of an excellent and expanding online community of short-term interns, mostly college students and Master's students. These students are working with Gitanjali Yadav and her collaborators, contributing towards extraction of knowledge from literature, focusing on viral epidemics.

Currently, the OpenVirus Online Platform has 15 students from remote parts of India in collaboration with KARYA initiative of the Govt of Rajasthan and INYAS and the University of Cambridge. Anyone interested in this initiative may contact Dr. Gitanjali Yadav. Visit the [OpenVirus](#) community for more information.

DBT-NIPGR scientists have also taken the lead in contributing to the Accelerate Vigyan effort of the Ministry of Science & Technology, towards widening the net to reach masses by providing capacity building for high end scientific manpower in advanced techniques in life science and genomics. Dr. Gitanjali Yadav conducted an online bioinformatics training for

construction and analysis of co-expression networks from gene expression data on Monday July 6. The event is organised through her India-U.K GCRF Program TIGR2ESS in collaboration with INYAS.
