SCIENCE & TECHNOLOGY EFFORTS IN INDIA ON COVID-19

Vigyan Prasar
[AN AUTONOMOUS ORGANISATION OF
DEPARTMENT OF SCIENCE & TECHNOLOGY]
GOVERNMENT OF INDIA

UPDATED REGULARLY
DATE: 18 APRIL, 2020
The 2019 Novel Coronavirus (SARS-CoV-2) has spread rapidly throughout the world and has assumed the proportion of a Pandemic. Given the lack of an efficacious vaccine as well as non-availability of suitable chemotherapeutic interventions, mankind is experiencing an unprecedented existential crisis.

2. The Ministry of Science and Technology and the Ministry of Health & Family Welfare, with their various departments, are contributing in various ways towards the national R&D efforts for developing solutions to combat COVID-19. The Department of Science & Technology under the Ministry has launched a nationwide exercise to map and boost development of COVID-19 solutions with R&D, seed capital and scale-up support. All academic and research institutions are being reoriented to focus on the development of diagnostics, vaccines, antivirals, disease models and other R&D to enable a cure for this dreadful disease. Around 15 labs of Council of Scientific & Industrial Research (CSIR), under the Department of Scientific & Industrial Research, across the country are working in close partnership with major private sector Industries, PSUs, MSMEs and other Government departments to develop solutions for COVID-19. The Department of Biotechnology (DBT) under the Ministry has also formed a consortium to support the development of Medical equipment, Diagnostics, Therapeutics, Drugs and Vaccines to meet the Healthcare Challenges. Indian Council of Medical Research (ICMR), under the Ministry of Health & Family Welfare has already isolated the virus strain successfully, which is a first step towards vaccine research. Similarly, various other organizations under Ministry of Human Resource & Development, Ministry of Defence, Ministry of Chemicals & Fertilizers, etc. are also contributing substantively to our R&D efforts. The private sector has also come forward in a big way to supplement these efforts.

3. With a view to spreading awareness about the S&T efforts of the Government of India as well as private sector in finding solutions for COVID-19, Vigyan Prasar - an autonomous institution under Ministry of Science & Technology and engaged in large-scale science communication and popularization activities - has compiled all initiatives being undertaken in this field.

4. This document “Science & Technology Efforts on COVID-19 in India” shall serve as a ready-reckoner for policy makers, scientists, researchers, scholars and other stakeholders who might be interested in understanding and keeping themselves abreast with the latest S&T efforts being made to develop solutions to combat COVID-19.

(Dr. Harsh Vardhan)
At the fag end of 2019, China informed the World Health Organization (WHO) regarding the occurrence of cases of pneumonia of an unknown cause in Wuhan City in Hubei province. On January 9, 2020, WHO issued a statement saying Chinese researchers have made the preliminary determination of the virus as a novel coronavirus. Since then, several lakhs of positive cases and more than one lakh deaths have been reported due to COVID-19 across the world. Lockdowns, curfews, sealing of hotspots of outbreak area, massive airport screenings, quarantines, and social distancing have become the norm across the globe.

In these critical times, access to authentic information is of paramount importance. Vigyan Prasar (VP) has been covering the pandemic since the early days with the science communication perspective and journalistic flavour, ensuring that science and safety are the primary focus. VP is a national level organization of the Department of Science and Technology, Government of India, engaged in science communication and popularization. The principal objective of VP is to serve India’s science popularization agenda. This is achieved through several strategically important two-way, stakeholder-specific approaches to communicate about principles and practices of science and technology and implications for development and quality of life. Science popularization therefore serves as a robust knowledge-led tool to fulfil various mutually reinforcing public policy objectives.

For the benefit of the stakeholders, we have prepared a compilation of the most relevant initiatives and efforts taken by the Government of India through its various Science Ministries, Departments, and Funding organizations. These organizations are geared for combating the epidemic of COVID-19. These research-driven and technology-based interventions have been initiated on war footing to fight out the outburst of the pandemic. Government of India, through its various wings, like Science Ministries, Departments, and Funding organizations, has invited Calls for Proposals (CFPs) and Expression of Interest (EoIs) to enhance research and development-related activities to battle the pandemic out.

We hope this initiative of Vigyan Prasar shall be a handy guide to scientists, researchers, and scholars, especially those who are interested in knowing various aspects of COVID-19 and contributing to the coronavirus warfare in whatever minuscule way and people at large.

Vigyan Prasar
New Delhi
12th April 2020, New Delhi

- Genetic sequencing was crucial in eradicating Polio; it will help in COVID-19 mitigation also, said Dr. Harsh Vardhan
- These are times of war, deliver solutions before war ends, not a routine research project, states Dr. Harsh Vardhan
- COVID-19 will give boost to country’s resilience and self-reliance and enhance indigenous capacity in developing critical healthcare equipment

Today Dr. Harsh Vardhan, Union Minister for Science & Technology held a review with DG CSIR, Dr. Shekhar C. Mande and all the CSIR lab directors through video conference of the steps undertaken by CSIR and its constituent 38 labs towards mitigation of Corona Virus outbreak in the country.

DG CSIR Dr. Shekhar C. Mande informed that Core Strategy Group (CSG) has been set up in CSIR and the five verticals have been identified under which the COVID-19-related activities are being carried out. These include: Digital and Molecular Surveillance; Rapid and Economical Diagnostics; New Drugs / Repurposing of Drugs and associated production processes; Hospital Assistive Devices and PPEs; and Supply Chain and Logistics Support.
Dr. Mande also mentioned that 15 CSIR labs are working in close partnership with major Industries, PSUs, MSMEs and other departments and ministries at the time of the crisis in the country.

After briefing of all the efforts being made by the CSIR labs in finding a solution for COVID-19, Dr. Harsh Vardhan informed them about the steps being taken by the Government of India in combating COVID-19.

Dr. Harsh Vardhan exhorted CSIR scientists and said, “India has high expectations from its scientific community and I am sure that the community will rise to the occasion and deliver in this time of need”. He appreciated that CSIR Labs were also participating in testing of swab samples of COVID patients and some of them have started doing genetic sequencing of the virus with a target of doing 500 sequencing in coming weeks. Dr. Harsh Vardhan said, “Genetic sequencing is very crucial in identifying the host response as well as identifying population vulnerability to the disease.” He said, “These genetic sequencing efforts remind me of Polio eradication movement 26 years back. Towards the fag end of the Polio movement, active surveillance of the country was done to find out the cases of acute flaccid paralysis. That time also, genetic sequencing was used to establish the travel history of polio virus which eventually helped in the eradication of polio.”

He also appreciated CSIR for partnering with MSMEs, Major industries, PSUs working on RT-PCR machines. He said, “Plasma-based therapy is very much needed at this hour. For this, we need to motivate the patients who have recovered from the COVID-19 to donate blood.”

He also appreciated the work done by CSIR-NAL with BHEL and BEL on Ventilators, Oxygen Enrichment Devices and 3-D printed face shields, face masks, gowns and other protective equipment. “All these things will help us in next few weeks,” he said.

Dr. Harsh Vardhan, however, cautioned CSIR scientists to develop COVID-19 mitigation solutions keeping fixed timeframe in mind. “These are times of war, CSIR scientists should work to deliver solutions before war ends, they should not treat it as a routine research project”. He said, “COVID-19 has also come as a blessing in disguise as it will give boost to country’s resilience and self-reliance and enhance indigenous capacity in developing critical healthcare equipment.” He also appreciated the collaboration being done by the CSIR scientists using Video Conferencing tools and reiterated the scientists that while doing research they should continue observing social distancing and lockdown because till such time vaccine is developed by scientists to combat COVID-19, these two remain the most potent form of social vaccine.

Dr. Shekhar C. Mande, DG, CSIR, Dr. Anurag Agrawal, Director, Institute of Genomics and Integrative Biology (CSIR-IGIB) and Dr. Nakul Parashar, Director, Vigyan Prasar were present in the review meeting with the Union Minister. Directors of remaining 38 CSIR labs attended the meeting through Video Conference.
Sree Chitra Tirunal Institute for Medical Sciences and Technology, Thiruvananthapuram, an institute of national importance of the Department of Science and Technology (DST), has developed a diagnostic test kit that can confirm COVID-19 in 2 hours at low cost.

The confirmatory diagnostic test, which detects the N Gene of SARS-CoV-2 using reverse transcriptase loop-mediated amplification of viral nucleic acid (RT-LAMP), will be one of the world’s first few, if not the first of its kinds, in the world.

The test kit, funded by the DST called Chitra GeneLAMP-N, is highly specific for SARS-CoV-2 N-gene and can detect two regions of the gene, which will ensure that the test does not fail even if one region of the viral gene undergoes mutation during its current spread.

The tests performed at NIV Alappuzha (authorized by ICMR) show that Chitra GeneLAMP-N has 100% accuracy and match with test results using RT-PCR. This has been intimated to ICMR, the authority to approve it for COVID-19 testing in India, following which license needs to be obtained from CDSCO for manufacturing.

Current PCR kits in India enable detection of E gene for screening and RdRp gene for confirmation. Chitra GeneLAMP-N gene testing will allow confirmation in one test without the need for a screening test and at much lower costs.

The detection time is 10 minutes and the sample-to-result time (from RNA extraction in swab to RT-LAMP detection time) will be less than 2 hours. A total of 30 samples can be tested in a single batch in a single machine allowing a large number of samples to be tested each day.

“Development of a novel, inexpensive, rapid confirmatory for the diagnosis of COVID-19 by Sree Chitra in record time is a compelling example of how a creative team of clinicians and scientists working together seamlessly can leverage knowledge and infrastructure to make relevant breakthroughs. Establishment of a Technology Research Centre at SCTIMST and four other DST institutions has brought rich dividends by conversion of basic research into important technologies,” said Prof Ashutosh Sharma, Secretary, DST.

The testing facility can be easily set up even in the laboratories of district hospitals with limited facilities and trained laboratory technicians. The results can be read from the machine from
the change in fluorescence. The cost with the new device for LAMP testing and the test kit for 2 regions of N gene (including RNA extraction) will be less than Rs 1000 per test for the laboratory.

Sree Chitra has also additionally developed the specific RNA extraction kits along with GeneLAMP-N test kits and testing devices. The technology was transferred for manufacture to M/S Agappe Diagnostics Ltd, Ernakulam, a leading company in in-vitro diagnostics with national and international operations.

Dr. Anoop Thekkuveettil, a senior scientist of the Biomedical Technology Wing of the Institute and Scientist-in-charge of the division of molecular medicine under the Department of Applied Biology and his team developed the kit in the last 3 weeks.

For more details, please contact: Ms. Swapna Vamadevan, PRO, SCTIMST, Mob: 9656815943, Email: pro@sctimst.ac.in

Expanding testing facilities in the country
The Empowered Committee on R&D has worked towards enhancing the testing facilities to meet COVID-19-related challenges by leveraging the existing resources (instruments and human resources) in Government of India laboratories. It has enabled ICMR to issue the required notification allowing institutions under DST, DBT, CSIR, DAE, DRDO and Indian Institute of Science (IISc) to self-assess and prepare their BSL labs for research and testing of coronavirus.

The O/o PSA has developed a “Handbook for COVID-19 testing in Research Institutions” which allows more such labs to self-assess its preparedness in terms of equipment, staff and expertise required for COVID-19 testing. A detailed checklist has been outlined, which can be used by a research lab to self-assess and indicate their preparedness for declaring the lab as a research and testing facility for COVID-19 after ICMR approval. (This handbook has been assembled by a group of young researchers whose efforts are gratefully acknowledged).

SCIENCE & TECHNOLOGY EFFORTS ON COVID-19

BY

DEPARTMENT OF SCIENCE AND TECHNOLOGY (DST)

Interview of DST Secretary Prof. Ashutosh Sharma

BIG ‘DESI’ development on a rapid test for COVID-19 has now been discovered by the Thiruvananthapuram-based government Lab. They have developed a new confirmatory diagnostic test for the coronavirus that gives results in minutes. Once scaled up, this will lessen the burden of importing test kits. In a special interview with Pallava Bagla, Prof. Ashutosh Sharma, Secretary of Department of Science & Technology, talked about this very important development.

RRI scientists explain the relevance of the mathematical model

Scientists of the Raman Research Institute (RRI), an autonomous institute of the Department of Science and Technology, have analysed the importance of mathematical models that are being used by scientists for prediction of COVID-19 pandemic for planning future actions and the relevance of these models for the common public.

RRI scientists Joseph Samuel (RRI, ICTS) and Supurna Sinha (RRI) have reached out to the common people and explained the relevance of mathematical models in decision making for citizens and policymakers who may not be from scientific backgrounds.

They have addressed key questions like what one can learn from these models, how seriously they should be taken, why the predictions from different models may differ, and how these models are constructed.

The article seeks to remove the confusion that may be prevailing about mathematical models due to the varied predictions they make. It also elucidates how models have been used by many countries in taking decisions. The scientists have explained that simple models can capture qualitative features well and make predictions based on the value of a few parameters (for instance, the doubling time), which can be gleaned from the past data. As the models get more
complicated and realistic, the number of parameters also increases. This results in a new kind of uncertainty stemming from our ignorance of a large number of parameters. Small changes in the parameters can lead to large changes in the outcomes over a period of time. For more details please contact Prof. Joseph Samuel, sam@rri.res.in, Mob: 9900130049

Indian industries respond enthusiastically to TDB's invitation for proposals for fighting COVID-19

The Indian industry and the start-up ecosystem have responded enthusiastically to the invitation by the Technology Development Board (TDB), a statutory body of the Department of Science and Technology (DST), for proposals from Indian companies and enterprises for supporting technologically innovative solutions towards fighting COVID-19.

TDB provides financial support to Indian companies for the commercialization of indigenous technology or adaptation of imported technology and had invited proposals on March 20, 2020, to strengthen the nation’s core capacities in fighting COVID-19. It covers key areas like surveillance, laboratory support, infection prevention and control, logistics, risk communication, and, in particular, to strengthen the capabilities in terms of isolation and management of critically ill patients for containing and preventing the spread of the pandemic.

Integrated geospatial platform to help area-specific strategies & decisions in COVID-19 outbreak

The Department of Science and Technology (DST), Government of India, has created an Integrated Geospatial Platform out of available geospatial datasets, standards-based services, and analytic tools to help decision making during the current COVID-19 outbreak and aid devising area-specific strategies to handle the socio-economic impact in the recovery phase.
The platform is initially expected to strengthen the public health delivery system of the State and Central Governments and subsequently provide the necessary geospatial information support to citizens and agencies dealing with the challenges related to health, socio-economic distress, and livelihood challenges. The mobile application SAHYOG as well as the web portal (https://indiamaps.gov.in/soiap/) prepared and managed by the Survey of India (SoI) has been customized to collect COVID-19-specific geospatial datasets through community engagement to augment the response activities by Government of India to the pandemic. Information parameters required as per the Govt. of India strategy and containment plan for large outbreaks have been incorporated in the SAHYOG application. This mobile application will complement the “AAROGYA SETU” mobile application launched by the Government of India for Contact tracing, Public awareness, and Self-assessment objectives. State Spatial Data Infrastructure (SSDI) in Madhya Pradesh, Odisha, Punjab, and Jammu & Kashmir have been providing collateral standards-based geospatial data services to the State and District Level authorities in the respective States through State Geoportals for integration with related health datasets towards combating COVID-19 pandemic.

**Special Call under SATYAM to fight against COVID-19**

Department of Science and Technology invites concept note under ‘Science and Technology of Yoga and Meditation (SATYAM)’ for the appropriate intervention of yoga and meditation to fight against COVID-19 and other similar kinds of viruses. This special call aims to provide assistance to our society in today’s critical condition arising due to the pandemic COVID-19. The project may address on improving immunity, improving respiratory system, stress, anxiety, depression and others.

The concept note may be submitted at e-PMS (onlinedst.gov.in) till April 30, 2020.

**Website link:**

**Call for Expression of Interest - 2nd Set of Products**

Sree Chitra Tirunal Institute for Medical Science and Technology (SCTIMST), Thiruvananthapuram, an institute of national importance under the Department of Science & Technology, Government of India, has developed designs and know-how for several products to combat the COVID-19 pandemic crisis. The institute is interested in transferring these designs and know-how to entities that can manufacture and make them available to the users. Expression of Interest (EoI) is invited from interested entities for this purpose.

**Website link:**

**Expression of Interest for developing and manufacturing devices for the fast track Programme for COVID-19 pandemic**

Sree Chitra Tirunal Institute for Medical Science and Technology (SCTIMST), Thiruvananthapuram invites manufacturers/startups/social groups who are interested in working with the Institute to co-develop and manufacture medical devices on a fast track mode to support the distressing situation created by the epidemic COVID-19. The call is for the development of Ambu bag-based Ventilators, Ventilator Sharing Kit, Battery-operated Assistive Breathing Unit, Isolation Pods, Disposable Safety Face Shield and Deployable Field Units.

**Website link:**
https://www.sctimst.ac.in/RESOURCES/EOI%20COVID%2019%20-%202029.03.2020.pdf
Proposals invited on COVID-19 & related respiratory viral infections

Science & Engineering Research Board (SERB), a statutory body of the Department of Science & Technology, invites proposals as part of special call under IRHPA (Intensification of Research in High Priority Area) scheme designed explicitly for COVID-19 and related respiratory viral infections to ramp up national R&D efforts for new antivirals, vaccines, and affordable diagnostics.

Website link:

Call for Proposals: Indo-U.S. Virtual Networks for COVID-19

The Indo-U.S. Science and Technology Forum (IUSSTF) announces a Call for Proposals for COVID-19 Indo-U.S. Virtual Networks. IUSSTF encourages proposals that convincingly demonstrate the benefits and value of the Indo-U.S. partnership to advance research and address critical challenges related to COVID-19. Virtual Networks would allow Indian and U.S. scientists and engineers currently engaged in COVID-related research to carry out joint research activities through a virtual mechanism, leveraging existing infrastructure and funding. These network projects could be of two types: Knowledge R&D Networks and Public-Private Virtual Networks.

Last date of submission: May 15, 2020

Website link:
https://iusstf.org/announcements-and-events

United States - India Science and Technology Endowment Fund COVID-19 Ignition Grants

IUSSTEF would select and support promising joint U.S.-India S&T-based entrepreneurial initiatives that address the “development and implementation of new technologies, tools, and systems to address COVID-19-related challenges including monitoring, diagnosis, health and safety, public outreach, information and communication”. These initiatives can originate from government, academic, non-governmental or commercial entities and any combination thereof, provided they focus on applied R&D and have commercial potential. USISTEF would also consider proposals related to technologies/products that can be re-purposed to address COVID-19 in the current scenario. USISTEF encourages projects that demonstrate a high degree of innovation leveraging advances in science and technology.

Last date of submission: May 15 2020

DBT-InStem develops germicidal protection for PPE

Dr. Praveen vemula’s lab at DBT-Institute for Stem Cell Science and Regenerative Medicine (inStem) has developed a proprietary germicidal molecule, which could be used to produce anti-germ facemasks and other personal protection material (PPE). This molecule can be covalently attached to any type of cotton fabric including household cotton and the fabric can then be stitched into PPE such as a facemask. The molecule is effective against both Gram-positive and Gram-negative bacteria and even enveloped viruses. Research and testing has concluded that this compound remains attached to the fabric for up to 25 cycles of standard detergent wash (industrial grade) at least. One can use such ‘germicidal’ masks efficiently and repeatedly without much fear by just cleaning them with regular soap wash at home or dipping them in boiling water for five minutes and drying, thus resulting in better waste management and environmental pollution. This compound can be scaled at the industrial level.

DBT-ILS starts testing for COVID-19

DBT-Institute of Life Sciences (DBT-ILS), Bhubaneshwar has started testing for COVID-19 in its newly commissioned BSL 3 facility after due approval of DBT and Indian Council of Medical Research (ICMR). COVID-19 testing commenced from April 14, 2020 with 55 samples provided by Health and Family Welfare Department of Odisha Government.

Special session of DBT-BIRAC’s FIRST HUB for COVID-19 solutions

Department of Biotechnology and its PSU Biotechnology Industry Research Assistance Council (BIRAC) have initiated a special FIRST HUB (Facilitation of Innovation and Regulation for Start-ups and Innovators) Weekly Session only for COVID-19 solutions.

BIRAC has set up FIRST HUB to help promote government initiatives on Start-up India and Make in India. It addresses the queries of start-ups, entrepreneurs, researchers, academicians, incubation centres, and SMEs. The policies, rules and regulations keep changing, and keeping pace with the fast changing ecosystem is next to impossible for small companies and young entrepreneurs. BIRAC, through its various programmes, is already facilitating research and innovation and FIRST HUB is envisaged to complete the 360 degree start-up facilitation.

FIRST HUB is open on every first Friday of the month at BIRAC office from 3:00 pm to 5:00 pm. Officers from DBT, BIRAC, ICMR, CDSCO, BIS, NIB and other relevant government organisations will be available for taking queries related to:
- Regulatory pathways and regulations;
- Funding opportunities;
- Mentorship;
- Investment opportunities;
- Market access;
- Industry-Academia partnerships; and
- Intellectual Property.

**Webinar on Covid-19: Role of Language in a Pandemic**
Department of Biotechnology’s Faridabad-based associated institution Translational Health Science and Technology Institute (THSTI), India Alliance, IAVI and Nature India organised the fourth webinar on COVID-19 “Ask the Experts” on April 17th, 2020 at 4pm. The webinar was titled Role of Language during a Pandemic.

**Website link:**

**BIRAC partners with Invest India for CSR funds for its research consortium**
Department of Biotechnology’s public sector undertaking Biotechnology Industry Research Assistance Council (BIRAC) has entered into a partnership with Invest India to seek CSR Funds for its COVID-19 Research Consortium.

The consortium has been set up with a view to accelerate development of diagnostics, vaccines, novel therapeutics and re-purposing of drugs for this novel coronavirus. There is limited current level of knowledge about the new virus. Critical research questions need to be answered urgently and ways have to be found to fund priority research that can contribute to curtail this outbreak and prepare for future outbreaks.

**Website link:**

**IHF’s quest to support innovations to tackle respiratory diseases, including COVID-19**
As Governments across the world grapple with containing COVID-19, the India Health Fund (IHF) is looking to support innovations that can fight respiratory and airborne infections through its nationwide search, Quest 2020. The quest will provide an opportunity for innovators, scientists and entrepreneurs across sectors to share novel prototypes, which could be game changers in the fight against these diseases, IHF added. Quest 2020’s nationwide search for
innovations is already open, and innovators have time till April 22, 2020, to send in their applications. The primary aim of this initiative is to support the government’s ambitious goal to eliminate tuberculosis in India by 2025 and join the fight against the deadly new coronavirus.

https://www.thehindubusinessline.com/companies/ihfs.quest-to-support-innovations-to-tackle-respiratory-diseases-including-covid-19/article31344254.ece

**BIRAC supported Twenty In-Market Startup Products**

India Fights Corona: Details of 20 In-Market products from BIRAC supported Startups as potential COVID solutions can be found in the following link.

Fetal Lite: It is an instrument devised to monitor the fetal heart rate for the women-in-labour.

LUNGiQ: It is an instrument devised to review precision insights from Lung CTs.

**Website link:**
https://birac.nic.in/webcontent/1585918972_covid_solution_v2.pdf

**COVID GYAN**

Covid Gyan serves as a hub to bring together a collection of resources in response to the COVID-19 outbreak. These resources are generated by research institutions in India and several associated programmes. The content presented on the website provides a scientific understanding of the disease and its transmission. The main objective of the website is to create public awareness and bring in a holistic approach to the understanding of COVID-19 disease and potential means to mitigate it.

Various autonomous institutions associated with the Department of Biotechnology (DBT) are resource providers to this initiative, like the Institute for Stem Cell Science and Regenerative Medicine (InStem) and the Centre for Cellular And Molecular Platforms (C-CAMP).

**Website link:**
https://covid-gyan.in/

**A new kit to detect COVID-19 infection**

Researchers at the Rajiv Gandhi Centre for Biotechnology (RGCB), Thiruvananthapuram are in the final stages of developing a kit that promises to help detect SARS CoVID-19 infection as early as four days post-infection of the virus. The kit will be able to detect two types of antibodies - Immunoglobulin M (IgM) and Immunoglobulin G (IgG).

**Website link:**
Another CSIR lab to start genome sequencing of novel coronavirus

After the Centre for Cellular and Molecular Biology (CCMB) and the Institute of Genomics and Integrated Biology (IGIB), one more institute of the Council of Scientific and Industrial Research (CSIR) has started whole-genome sequencing of the novel coronavirus. Chandigarh-based Institute of Microbial Technology (IMTech) has taken up the task of large-scale genome sequencing of the virus.

Viruses have a higher mutation rate compared to that of microbes, and their genetic material keeps on changing quickly as they replicate rapidly. “These genome sequencing samples will be submitted to the international recognised repository,” said Dr Sanjeev Khosla, Director, IMTech while speaking with India Science Wire.
The complete genome sequence information will enable researchers to gain insights about the origins of the virus, the different types of strains circulating in India and how it has spread across the length and breadth of the country. "The genomic resource obtained from this sequencing will also allow identification of new targets for diagnosis and drugs for COVID-19," said Dr Khosla.

CDRI's efforts to combat novel coronavirus

Working on three out of the five verticals formulated by the Council of Scientific and Industrial Research (CSIR), the Central Drug Research Institute (CDRI) has inked an MoU (Memorandum of Understanding) with King George's Medical University (KGMU) to sequence the virus strains obtained from COVID-19 patients in Uttar Pradesh. Initially, the Lucknow-based lab will sequence the virus strains from the samples of a few patients. This activity will be taken up under the first vertical, namely, 'digital and molecular surveillance'. As of now, eight different variants of the virus are known to be causing the COVID-19 infection. A team has been put into place for analyzing whether changes to the viral sequences, if any, will impact the proposed treatment strategies.

Therapeutics or repurposing of drugs to fight against COVID-19 is the second vertical where CDRI is getting involved. Under this, the researchers are trying to repurpose some already existing drugs that have been used by the clinicians. "One of the fastest ways to get therapeutics to the patient is through repurposing known drugs against COVID-19 infection. Here, CDRI has identified several candidate drugs for repurposing and will develop them further under the collaboration," said Professor Tapas Kumar, Director, CSIR-CDRI.

The Institution has a diverse library of molecules and these have been screened using in silico approaches against a panel of drug targets from SARS-CoV-2 under the third vertical, 'target-based screening systems'.

कोविड–19 से लड़ने के लिए सीएसआईआर लेब के शोधार्थियों ने बढ़ाया हाथ

वैज्ञानिक तथा औद्योगिक अनुसंधान परिसर (सीएसआईआर) की जोरदार स्थिति प्रयोगशाला उत्तर–पूर्व विश्व तथा औद्योगिक संस्थान (एनईआईएसटी) के शोधार्थी छात्रों ने भी अभियान कोविड–19 के खिलाफ लड़ने को निश्चित कर दे दिया। एनईआईएसटी के विद्यार्थी अभ्यासक से आह्वान पर संस्थान में अध्ययन कर रहे शोधार्थियों ने भी कोविड–19 के संदर्भ में जरूरतमंदों की मदद के लिए पीएम–केयर फंड में आर्थिक सहयोग राशि जमा कराई है। इस पहल के अंतर्गत संस्थान के 58 शोधार्थियों ने 54,201 रुपये पीएम–केयर फंड में जमा कराए। यह सहयोग राशि पीएम–केयर के कोविड–19 दान से संबंधित है जबकि सीएसआईआर के सीनियर विद्युच्छ फेलो (एसआरएफ) प्रत्यक्ष दाता के खाते से 15 अगस्त को जमा कराई गई है। सीएसआईआर–एनईआईएसटी कोविड–19 से लड़ने के लिए हैंड–सेनिटाइजर, लिक्विड हैंडवॉश और संक्रमण दूर करने वाले लिक्विड जैसी निजी सुखा से मिलती समस्या का उपायन कर रहा है। यह सामग्री पुलिस स्टेशन, प्रशासन, पोस्ट ऑफिस, बैंक, ऑयल एंड नेचुरल गैस कॉर्पोरेशन लिमिटेड (डॉ.सीसीएस), ब्रह्मांड रूलर्स एंड पावरलिमिटेड (डॉ.सीसीएस), जिला न्यायालय, भारतीय खाद्य निगम (एफसीआई), एयरफोर्स स्टेशन और स्थानीय समुदाय के बीच वितरित की जा रही है।

सुरक्षा सामग्री का उत्पादन बढ़ाने के लिए सीईसीआरआई ने तेज़ की मुहिम कोविड-19 के बढ़ते प्राकृतिक कारण निजी सुरक्षा उपकरणों की मांग भी तेज़ी से बढ़ रही है। निजी सुरक्षा उपकरणों की जरूरत को देखते हए तर्किलानदु के कर्ता कुली से शिष्ट कृत्रिम विभिन्न संसाधन अनुसंधान संस्थान (सीईसीआरआई) निजी सुरक्षा उपकरणों के उत्पादन को बढ़ाने के लिए इंडस्ट्री के साथ मिलकर काम कर रहा है। संकरण को रोकने के लिए संयुक्तजय, अस्पतालों के सहायक उपकरण और निजी सुरक्षानक उपकरण बेहद जरूरी हो गए हैं। सीईसीआरआई द्वारा बनाए जा रहे निजी सुरक्षा से संबंधित सामग्री में विश्व स्वास्थ्य संगठन (डब्ल्यूएचओ) के दिशा-निरंतरों के अनुसार बना हैंड सेटिटेजर, हैंडस्टर सॉल्यूशन और स्वास्थ्यकर्मियों और डॉक्टरों की सुरक्षा के लिए फेस शील्ड शामिल हैं। सीईसीआरआई निजी सुरक्षा उपकरणों का उत्पादन बढ़ा पैमाने पर करने के लिए इंडस्ट्री के साथ साझेदारी भी कर रहा है। फेस शील्ड के उत्पादन के लिए सीईसीआरआई ने मंडलसूर की श्रीदीप लाइफकैर्यों कंपनी के साथ कार्य कराया है। संस्थान की कौशल जमीन में सूचकात्मक प्रणाली फेस शील्ड के बेहतर संस्करण तैयार करने की है, ताकि इसे कोविड-19 से संक्रमित मरीजों की देखभाल में जुटे स्वास्थ्यकर्मियों और डॉक्टरों तक पहुँचाया जा सके।

Advisory for effective management & availability of safe drinking water during lockdown due to COVID-19

COVID-19 has taken pandemic proportions in many countries and in view of the seriousness of the matter, Government of India and State Governments have taken several pre-emptive measures to contain this disease in the country. Frequent washing of hands with frothing soaps is recognized as most efficient and effective measure in the listed preventive measures for controlling the spread of the virus. Thus, there is an urgent need to ensure that safe potable water is available to all citizens particularly in the rural areas where facility of medical sanitizers may not be available.

Guidance note for enabling delivery of essential health services during the COVID-19 outbreak

The COVID-19 outbreak has placed unprecedented demands on our health system. Focusing on COVID-19-related activities and continuing to provide essential services, it is important not only to maintain people’s trust in the health system to deliver essential health services but also to minimise any increase in morbidity and mortality from other health conditions. This note is released by ICMR that is intended to guide states to deliver essential health services for the duration of the COVID-19 outbreak. It elucidates a set of basic principles categorized by health systems elements and provides guidance on the essential services with details annexed. Essential services for all areas include reproductive, maternal, new-born and child health, prevention and management of communicable diseases, treatment for chronic diseases to avoid complications, and addressing emergencies.

From Gaganyaan to COVID-19: DFRL provides quick meals for healthcare workers

With the whole country engaged in fighting COVID-19, Defence Food Research Laboratory (DFRL) has now prepared and distributed over 10,000 Ready-to-Eat (RTE) meals for healthcare professionals in Kochi and Mysuru. The meals included tomato rice, vegetable pulao, sooji halwa, khichdi, combo meals like white rice and dal, and ready-to-drink packets of pineapple juice. All these have been distributed in the last two days.

MINISTRY OF ELECTRONICS AND INFORMATION TECHNOLOGY (MEITY)

Development and technology transfer of polymer swab for testing of COVID-19

Considering the acute shortage of testing kits in the country, Centre for Materials for Electronics Technology (CMET), Pune, under the aegis of scientific society of Ministry of Electronics and Information Technology (MeitY) has developed polymer swabs. These swabs are made up of polymer rod/stick and polymer fibres with locally-sourced materials. The polymer rod is developed with thermoplastic polypropylene materials through injection moulding. Polymer fibers are then crimp pressed on the polymer rod. Sri Research for Tissue Engineering Pvt Ltd, Bengaluru has been chosen to carry out clinical and ethical trials, in which satisfactory results have been observed. Additive Manufacturing Society of India, Bengaluru is now considering the production of these indigenous kits in the country.

Synthesis of nanoparticles and its coatings on cotton/polyester fibres for having antiviral and antibacterial properties

Centre for Materials for Electronics Technology (CMET), Pune, under the aegis of scientific society of Ministry of Electronics and Information Technology (MeitY) has developed antiviral and antibacterial masks with metal/metal-semiconductor nanoparticles as a cost-effective alternative of N95 masks for the Indian market. Yshawantrao Chavan Institute of Science,
(YCIS), Satara, Maharashtra, has been chosen to carry out testing of the masks for antibacterial properties and pathogen tests, which has shown encouraging results.

Cost-effective portable plasmonic sensor for random testing of novel coronavirus at the community level

Centre for Materials for Electronics Technology (CMET), Thrissur, Kerala, under the aegis of scientific society of Ministry of Electronics and Information Technology (MeitY), has developed a point-of-care plasmonic portable sensor with disposable semiconductor-based chips to detect antibody with the presence of COVID-19 virus in the blood. The sensor was tested for food-borne pathogens by Rajiv Gandhi Centre for Biotechnology (RGCB), Thiruvananthapuram. Functionalization of the sensor and the docking efficiency analysis are being carried out on the designed bio-receptors with different pathogenic strains. First version of the biosensor is under validation at RGCB. This technology is now being modified for antibody testing in blood for COVID-19 patients. Such portable devices would be beneficial for the random testing of patients at an affordable cost.

COVID-19-related research and development at IIT Delhi

IIT Delhi faculty members and researchers of different departments have taken various initiatives to combat COVID-19. In alignment with the combating the coronavirus outbreak, related R&D in many areas have been conducted to develop various technological products. These include production of 3-layered good quality surgical masks for hospitals & healthcare professionals, production of high efficiency face masks (N95), development of antimicrobial fabric for protection against hospital-acquired infection, detection assay for COVID-19, 3-ply mask, laminated knitted textile-based coverall, etc.
